

Project Phase 1 Document

Team: Joshua Rojas, Elizabeth Britton, Hamza Qaiser

Our team will be working using Node.js for our backend and html and javascript (likely Express) for our frontend.

We have a git setup on github. <https://github.com/josh-of-all-trades/CIS450>

Elizabeth will focus more on the front end of the website. Josh and Hamza will split the work of implementing features and the databases.

Timeline:

Phase II – We will work together to design the schema and think through what we need for our application

Phase III – Lizzy will work on the front end and work on getting a basic design. Josh and Hamza will work to set up the databases and to integrate the interchange to allow sending and receiving of information.

Phase IV – Lizzy will start finalizing the designs. Josh and Hamza will iron out the basic features needed; making sure everything is consistent with the databases. We hope to add Facebook and Yelp integration for extra credit.

Phase V – Everyone will make sure that the aspects of the project that they “own” are complete and are fully functional for the demo.
